Re: COVID-19 Update

To all our valued customers,

In conversations with all the communities we serve, it is encouraging to hear that vaccination clinics have been -for the most part- successful, and the uptake rate is high in most locations. At Perimeter Aviation we also have been working hard to have our staff vaccinated and we are happy to confirm that over 70% of our staff has at least received their first shot; this is an important step towards normalization and to further reduce the risk of COVID-19 spread.

As vaccination numbers climb, we are seeing some communities starting to request more flight frequency while they carefully reduce certain travel restrictions. Please contact me if you would like to discuss timeframes and strategies to increase service into your region.

While vaccination rates are encouraging, our approach to the current state of the pandemic remains optimistic but in high alert. None of the protocols previously announced and implemented throughout the pandemic have ended and we will continue to assist each community with their individual protocols and controls as we have done in the past.

Case numbers in the north appear to be in decline, it is an early indication that vaccines are starting to make a difference. We encourage all our customers to follow public health recommendations and get vaccinated as soon as possible. Vaccines are the only way out of the pandemic and Perimeter Aviation is willing to assist you in achieving your community vaccination goals, please reach out to me if you would like to discuss ways we can work together on this.

We at Perimeter are very honored to be in the position of providing essential services to our First Nation communities. Our workforce, at every level, works diligently to serve you with great care and safety. We thank them all for their dedication and thank you for your support during these extraordinary times.

Sincerely,

Carlos Castillo
VP Commercial Operations
Perimeter Aviation
